DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2, 10, 14, 16 are rejected under 35 U.S.C. 102(b) as being anticipated by

Hwang et al., U.S. Patent # 5,604,464.

Fig. 6 of Hwang discloses an amplifier comprising: inputs 411, 415 that received differential signals Vin+, Vin- can be read as a differential input; MOSFETs 412, 414 can be read as a first differential pair; MOSFETs 432, 434 can be read as a second differential pair; output at 447, 449 can be read as a differential output; level shift circuits 431, 433 can be read as a differential offset circuit having first and second source followers (see spec. col. 6, lines 38-55).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 10-14, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunt, EP 0723352 A2.

Fig. 9 of Hunt discloses a circuit comprising: inputs that received differential signals A, AN can be read as a differential input; FETs CT1, CT2 can be read as a first differential pair; FETs CT3, CT4 can be read as a second differential pair; output at connections of CT2, CT4 and of CT1, CT3 can be read as a differential output; transistors ST1, ST2 can be read as a differential offset circuit having first and second source followers.

Allowable Subject Matter

Claims ~~4, 5, 15~~ are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1, 3, ⁴⁻⁹~~6-9~~ are allowed.
